

# Domocompact My Home 2

Comfort and energy efficiency in our homes

## Case Study

## AIM

Redeveloping a luxury residential complex.

## • WHO

Sangalli Impianti s.r.l.

## • WHAT

Redevelopment of a residential complex of 33 luxury flats.

## • SOLUTION

Domocompact My Home 2

## • WHERE

Near Monza, Italy

## • WHEN

2023

Sangalli Impianti srl, which has been designing and building heating, air-conditioning and solar systems since 1954, was asked to upgrade a residential complex of 33 luxury flats near Monza.

Domocompact My Home 2 was the natural choice of the installer who, having known the reliability and quality of Watts products for years, succeeded in meeting the design requirement to improve the energy efficiency of the systems in all the apartments.

Compliant with MID Directive 2014/32/EU D.Lgs n 22 2/02/07, the My Home 2 thermoregulation and heat metering module of the Domocompact Series by Watts, in fact, is programmed according to the real plant requirements on the basis of the flow rate needs (required up to 1500 l/h).

*An overview of the installation.*

During installation, Domocompact modules can be supplied in a single stage or, following the progress of the work, in two stages: in particular, a simple template complete with shut-off ball valves and removable flushing pipes - supplied during the initial installation stages - allows the network to be tested for the first time and the fruit to be assembled at a later stage.

For this reason, the modules are designed to allow the creation and completion of the primary network without necessarily having to install the chosen Domocompact unit, such as the My Home 2 in this case.

The purpose of this service is to reduce possible site offences and other damage to the DOMOCOMPACT module, which, instead, will be positioned at the time of the first test for each individual utility (to be foreseen at the start of work).

The universality of installation and the transparency of consumption of this product make the models in the Domocompact range the best choice for those wishing to design a system with a high level of energy efficiency.

My Home 2, in fact, allows the end user to manage the activation times, the room temperature of their home in a completely autonomous manner and to obtain a correct allocation of expenses on the basis of actual energy consumption for heating and cooling and for hot and/or cold domestic water.

*“I have known Watts for years and they have always been synonymous with quality and reliability. The after-sales service is always very present during every phase of the installation and for any need they are able to support you competently and quickly.”*

## What our customers say

"I have known Watts for years," says the installer who handled the project, "and as far as I am concerned, the company has always been synonymous with quality and reliability. The after-sales service is always very present during each phase of the installation and for any need they are able to support you with competence and speed".

And he continues, "With regard to this project, I also particularly appreciated the simplicity of the installation phases, respecting the direction of flow required by the volumetric flow meter, in fact, there are no problems or malfunctions".

## About us

Watts is an American multinational and one of the world's biggest manufacturers of plumbing and heating products and components. Established in 1874, the business is based in North Andover (USA) and listed on the New York Stock Exchange. Watts has an administrative headquarters in Italy, along with two production sites and two research centres, and owns various market-leading brands. Thanks to its know-how, reliability, professional ethics and attention to health, safety and the environment, Watts contributes to technological research in the sector with a constant focus on energy saving, safety, and the quality of life.
